North Dakota residents must pay 2% sales tax except on seed and vegetable plants.

we can offer only two or three which we feel are safe for growing year after year in this area. Unfortunately, the hybrids brought in from the east and south have, in most cases, been very disappointing either because they lacked earliness or drouth resistance. All in all, it is best to plant the old reliable native varieties which have been tested in this climate for many years along with any acreage of hybrids with which you may care to experiment.

Year in and year out, Falconer and the early Flints will produce more than the hybrids so far available, will withstand more drouth and develop satisfactorily at lower temperatures than any of the hybrids and owing to their leafiness, will produce very much more valuable material for feeding-off in the field.

Certainly we must go easy on Wheat, and Corn seems to be one of the very safest and surest crops to replace it.

The world is still faced with many dangers and uncertainties but, at least in our Northern Plains we have been blessed with fairly satisfactory weather. About all we can do is to face the future with a stout heart, give our very best to whatever job we have in hand and try in every way to help stabilize the unsettled conditions to the best of our ability.

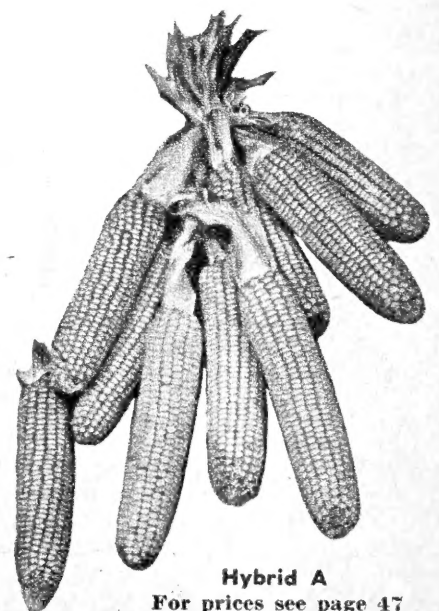

May the coming year be happy and prosperous for you all.

A Few Suggestions

The Sweet Pea plant or vine succeeds best in cool, moist, yet well drained soil. To secure the longest possible season of bloom the seed must be planted early. The best mode of planting is the trench method. The trench is dug two feet deep and two feet wide, and filled nearly to the surface of the ground with a mixture of well rotted manure and rich soil, with a six-inch layer of soil at the top. Soaking seed in water over night before planting will hasten germination. The seed should be sown, two inches deep, at the rate of one ounce to twenty feet. During dry weather the ground should be thoroughly soaked once or twice each week. A light spraying of the vines in the evening during hot weather will be found beneficial, and the earth should at all times be kept loose about the plants to a depth of two inches. Sweet Peas should be cut early in the morning and the more closely the flowers are kept cut off the longer will be the period of bloom. Remember, the vines quickly wither, if allowed to produce any great amount of seed. Spray thoroughly and often to prevent infection by aphids.

WILL'S BEANS

Belong in Every Garden

CULTURE: Beans should not be planted until the ground is warm, as cold and wet weather will cause the seed to rot. For garden culture plant four or five seeds in hills one foot apart, and the rows 18 inches apart. For field culture make the rows three or three and one-half feet apart, and cover with two inches mellow soil. Do not hoe or cultivate while the plants are wet with dew or rain, as getting the leaves bespattered with earth causes rust, which injures the crop. One pound of beans is a little more than one pint.

FIELD BEANS

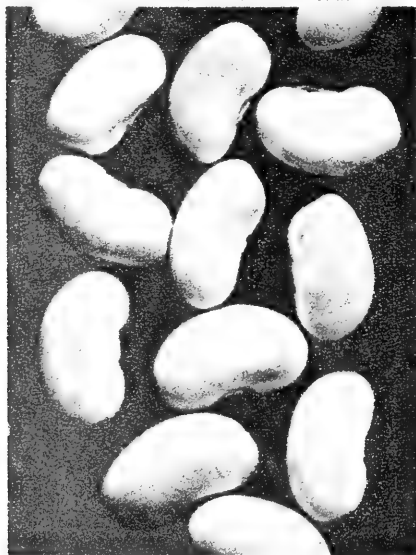

A Will Introduction GREAT NORTHERN—The Best Baking Bean

Everyone knows the Great Northern Beans, but few know that the seed was originally obtained over sixty years ago by Oscar H.

Will from Son of a Star, an Hidatsa Indian, by whose tribe it had been grown for many years. **Hardy**, a heavy yielder and early, it is much more tender and more quickly cooked than the Navy Bean, and one of the most largely grown field Beans.

GREAT NORTHERN-IDAHO NO. 56. A great improvement in yield and uniformity of seed over the standard Great Northern. $\frac{1}{4}$ lb., 16c; $\frac{1}{2}$ lb., 27c; lb., 44c, postpaid. Not prepaid, 10 lbs., \$2.00; 100 lbs., \$17.50.

HIDATSA. An early, very hardy, blight resistant, Red Field Bean originally obtained from the Hidatsa Indians. The seed is about the size and shape of the Great Northern and the quality excellent. Pkt., 10c; $\frac{1}{2}$ lb., 29c; lb., 46c, postpaid. Not prepaid, 10 lbs., \$2.30.

BEETS

Culture: Sow from April 15th to July 15th, covering 1 inch deep. Thin to 4 to 5 inches apart in the row. Thinning can be done gradually for greens and small beets. One ounce will sow 75 feet of row; six pounds, an acre. About 450 seeds in a packet.

IMPROVED BLOOD TURNIP BEET. 58 days. This is

an exceptionally fine strain of Crosby's Egyptian. The roots are somewhat flattened though globular, and the skin a very dark red in color. The flesh is of a slightly lighter shade and lightly zoned. The best first early Beet and a good keeper. Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 85c; $\frac{1}{2}$ lb., \$1.40; lb., \$2.25, postpaid.

EARLY WONDER or BOSTON CROSBY.

58 days. This selection from Crosby's Egyptian is not as early as the Improved. The roots are very uniform and more nearly globe-shaped with very small top and tap root, dark red skin with deep blood-red flesh and very little zoning. A very popular variety with market gardeners and unexcelled for the home garden. Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 85c; $\frac{1}{2}$ lb., \$1.40; lb., \$2.25, postpaid.

Small Green young Beets cooked with their equally tender tops are delicious and rich in vitamins.

Swiss Chard Lucullus

For continuous supply of young and tender beets make several sowings

OHIO CANNER. 62 days. This deep blood red Beet is free from zoning, flattened globe in shape, uniform in growth, tender, sweet, the most handsome Beet when canned that we know and outstanding for interior color. A desirable sort for all purposes. Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 90c; $\frac{1}{2}$ lb., \$1.50; 1 lb., \$2.45, postpaid.

Improved Blood Turnip

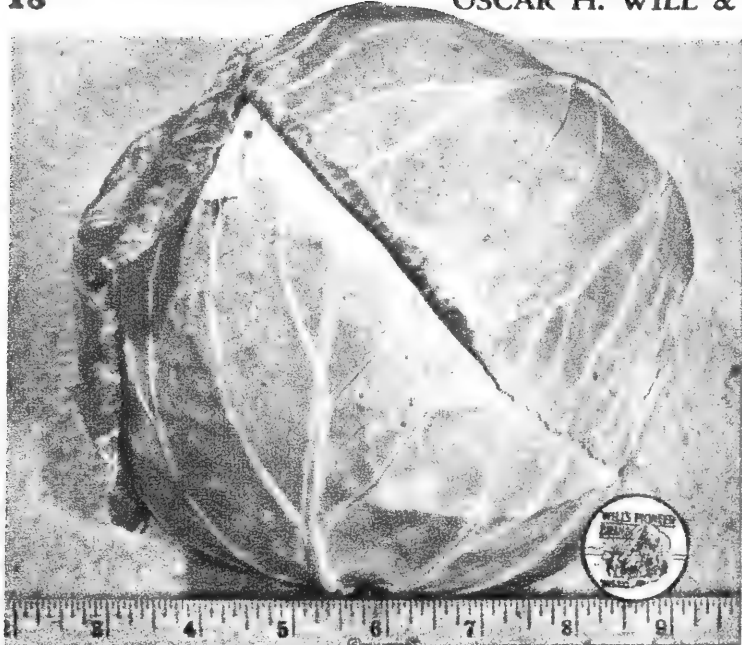

GREEN TOP BUNCHING.

58 days. An early, extremely attractive Beet with clean, grayish green foliage. The roots are round, smooth and glossy; the flesh bright blood red, finer and less fibrous than most Beets. Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 85c; $\frac{1}{2}$ lb., \$1.40; 1 lb., \$2.25, postpaid.

We shall appreciate notification by our customers of any change in address or duplication of catalogs.

SWISS CHARD

LUCULLUS. 60 days. To our mind the best vegetable that can be raised for greens. The crumpled, rich green outside leaves are picked off and the plant yields a constant crop from July well into September. The leaves are large and picking a mess of Swiss Chard for greens is short work. The thick broad stems may be cooked like asparagus or used for pickles. This is the most popular sort and gives big returns with little care. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 60c; $\frac{1}{2}$ lb., \$1.10; 1 lb., \$2.00, postpaid.

Copenhagen Market

COPENHAGEN MARKET

70 days. This is in our opinion the heaviest yielding and best quality Cabbage that can be grown. A dependable yielder of smooth, round, even sized heads, valuable for either extra early or main crop use. The plant is short stemmed and compact, leaves medium light green, and the heads average about 4 pounds. Pkt., 15c; oz., 55c; $\frac{1}{4}$ lb., \$1.65; $\frac{1}{2}$ lb., \$2.80; 1 lb., \$4.90, postpaid.

EARLY ROUND RED DUTCH. 80 days. Early, solid and a good keeper, the heads average 5 to 6 inches in diameter. Pkt., 15c; oz., 55c; $\frac{1}{4}$ lb., \$1.65, postpaid.

Round Red Dutch

EARLY DWARF ROUND DUTCH. 71 days. A fine second early for home and market garden. A sure header, the solid heads are medium green in color and flattened globe shaped, weighing from 4 to 5 lbs. This variety stands heat. Pkt., 15c; oz., 60c; $\frac{1}{4}$ lb., \$1.80; $\frac{1}{2}$ lb., \$3.10; 1 lb., \$5.50, postpaid.

PENN STATE BALLHEAD. 100 days. Largest of the ball-head types, this is notable for its heavy yield and excellence for winter storage and for making kraut. The uniform heads are a flattened globe shape. Pkt., 15c; oz., 50c; $\frac{1}{4}$ lb., \$1.50; $\frac{1}{2}$ lb., \$2.50; 1 lb., \$4.50, postpaid.

Culture: For early plants sow seed in boxes indoors or in hot bed, allowing 6 to 7 weeks from sowing to setting in the open ground. Some recommend planting the seeds in the field, 3 or 4 seeds to a hill and leaving the strongest plant. One ounce of seed will produce from 1500 to 2000 plants in open ground, 3000 in frames. 4 to 6 ounces of seed is required to produce plants for an acre. No. of days is from setting plants.

EARLY VARIETIES

For early use we recommend especially Golden Acre and Copenhagen Market; for late use, Danish Ballhead.

GOLDEN ACRE—Earliest of All

66 days. First of the Copenhagen Market type by ten days, this is the earliest round headed Cabbage. The plants are dwarf and compact. The heads weigh about 3 pounds, are round as balls, solid, very uniform and sweet. If you want the earliest Cabbage and the top prices that go with it, plant our Golden Acre. Pkt., 15c; oz., 55c; $\frac{1}{4}$ lb., \$1.65; $\frac{1}{2}$ lb., \$2.80; 1 lb., \$4.90, postpaid.

Golden Acre

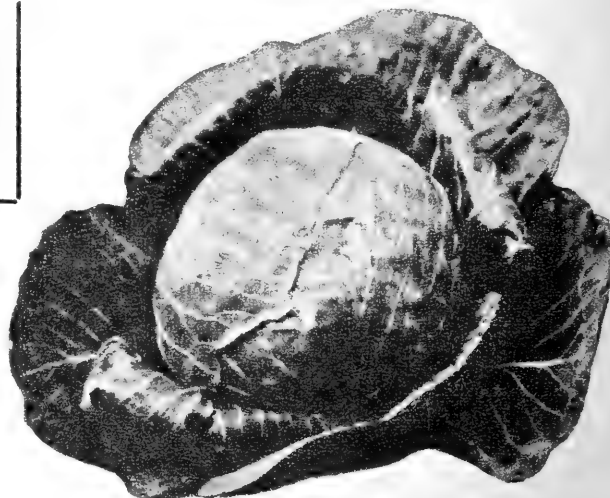

CHIEFTAIN SAVOY

88 days. An early Savoy with round, medium sized heads. The much crumpled leaves are dark green. Savoy Cabbage is of distinctly mild and delicate flavor. Pkt., 15c; oz., 65c; $\frac{1}{4}$ lb., \$1.95, postpaid.

EARLY JERSEY WAKEFIELD

62 days. A standard, widely grown sort and the earliest pointed variety. The conical heads are solid and the small outer leaves permit close planting. Pkt., 15c; oz., 45c; $\frac{1}{4}$ lb., \$1.30; $\frac{1}{2}$ lb., \$2.30; 1 lb., \$4.05.

For clean Cabbage watch for the white Cabbage moths. They lay eggs that graduate into Cabbage worms. Dust with Garden Guard when you see the moths hovering and at intervals thereafter.

FEEDING CORN IN THE NORTHERN PLAINS

Corn is grown for feed. The corn that produces the most in both ears and stalks is the cheapest to feed. It costs money to pick corn—hogs, cattle and sheep pick for nothing. Feeding corn in the field is the most economical way to handle.

For feeding in the field the highest yields always come from flint corn, flour corn and semi-dents.

FALCONER SEED CORN

Oscar H. Will & Co. Strain—Highest Yielding Corn for the Northwest

Falconer corn is grown by the hundreds of thousands of acres now and many thousands of these acres of so-called Falconer are off type, unselected or poorly selected scrub corn of the poorest type and certain to make inferior yields.

We introduced Falconer Corn. Falconer in careful tests over most of our state has outyielded every variety including hybrids.

The answer seems obvious then. Buy genuine Falconer of true, high yielding strain from Oscar H. Will & Co. Lb., 50c, postpaid. F.O.B. here: 10 lbs., \$1.70; ½ bu., \$3.25; bu., \$6.00.

WILL'S ORIGINAL NORTHWESTERN DENT

The original Northwestern Dent Corn, a history of which is given in Bulletin No. 107 of the Montana Experiment Station, was introduced by Oscar H. Will in 1896, and almost immediately attained great popularity over the whole Northwest. Color: Red and white.

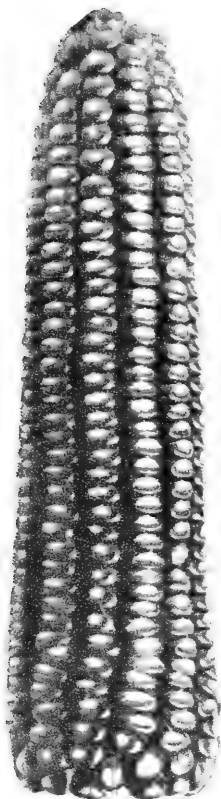

It is extremely hardy and will produce a crop when all other Dents fail, owing to its frost and drouth resistance. It ripens in 80 to 85 days. Lb., postpaid, 50c. F.O.B. here: 10 lbs., \$1.70; ½ bu., \$3.25; bu., \$6.00.

PIONEER HYBRID SEED CORN

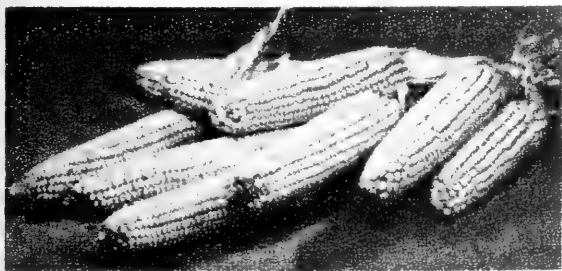

Mr. Hardy Pioneer Hybrid says:

Another year with a short, cool season should convince dwellers in the Northern Great Plains that the Southern and Eastern Hybrids which have been so profusely distributed in the area, cannot be relied upon to produce a crop of Corn.

Wills Pioneer Hybrids Are Bred and Grown for Great Plains Conditions

We are the only commercial Seed House in the North that has conducted a long continued project of Corn inbreeding and crossing with special reference to Northern Plains conditions.

HYBRID "O." 78 days. The first hybrid with blood of the very high yielding flour corn group. A cross between a Nodak single cross and a single cross of two yellow flour corn inbreds. Very heavy yielding, very leafy, early.

Pioneer Hybrid K

Pioneer Hybrid A

PIONEER HYBRID "K." 80 days. Falconer and Nodak 301 combination. Heaviest producer of dry ripe corn in our trials of many kinds, this last year. A sure corn to ripen and outstanding in all respects. A handsome yellow dent.

NODAK HYBRID No. 301. 83 days. Somewhat earlier than most dent hybrids. We have found it to do somewhat better under our local conditions. A beautiful appearing yellow dent and the hardest and surest pure yellow dent that we have found in a long list of hybrids.

No. Dak. Hybrid 301

Early and Cold Resistant

And best germinating, Pioneer Hybrids are treated with non-poisonous dust. This increases the seeds' ability to fight off disease and make a good stand.

Wind Resistant

A strong stalk with a massive root system gives added protection against high winds.

High Yields

Will's Pioneer Hybrids' exceptionally high yields bring Repeat Buyers who want to grow these remarkable hybrids year after year.

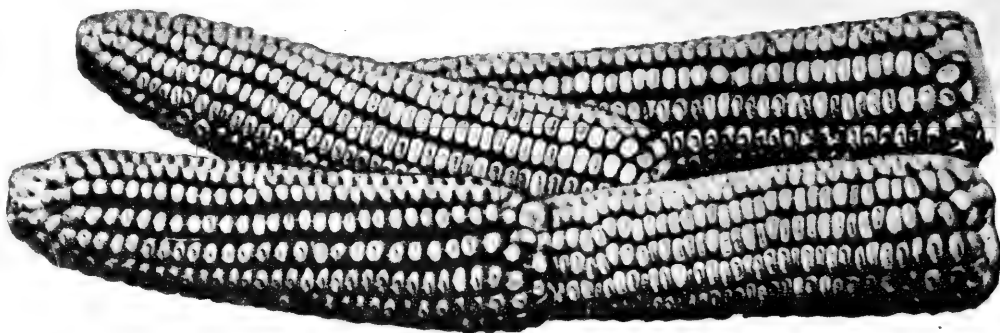

Drought Resistant

Pioneer Hybrids are bred from the hardest corns grown in the Great Plains area—increasing their drought resistance for your protection.

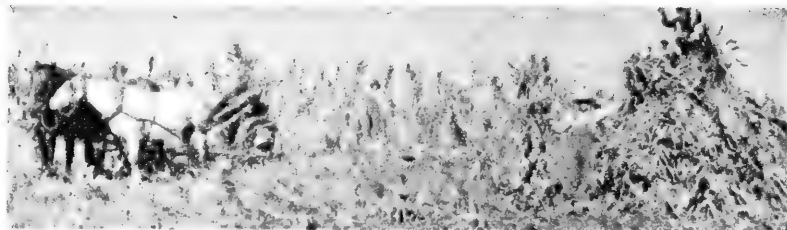

SQUARE DEAL DENT.

(85 days) Probably the earliest pure yellow dent. Bred by Oscar H. Will 50 years ago for Great Plains conditions. Deep kernels and proportion of shelled

corn is very high. Ears 2 to 3 ft. high on the stalk and are very easily picked with a mechanical picker. Lb., postpaid, 50c; F.O.B. here: 10 lbs., \$2.00; ½ bu., \$3.25; bu., \$6.00.

Acme Fodder Corn

Cutting 4X Fodder

ACME FODDER CORN. Mixed Dent of Great Plains Types. Almost perfect as a silage corn. This is a mixture of off-type early dents and semi-dents with a previous year's cross. This sort of combination means heavy growth and yield combined with the natural earliness of its components. Easily handled with a binder. Lb., 50c, postpaid. F.O.B. here: 10 lbs., \$1.25; ½ bu., \$3.00; bu., \$5.50.

4X FODDER CORN — Southern Grown, Tall, Leafy

The 4X is, we consider, the very best procurable fodder Corn for Northwestern conditions. We get this grown just far enough south so that **maximum quantity of fodder is produced** and at the same time the stalks come near enough to maturity so that they are **not all water**. The best time to cut Corn for fodder is when the kernels are just past the roasting ear stage. Sow or drill ten pounds to one-half bushel per acre, if planted with a planter; 2½ bu. if broadcast. F.O.B. here: bu., \$5.00.

SWEET FODDER CORN — Wonderful Feed for Milch Cows

4X Fodder Corn

Sweet Fodder is coming to occupy a place of very high esteem as a feed for milch cows. Owing to the fact that its **sugar content is so high** it is a more concentrated feed than the ordinary Corn. It is likewise a heavy yielder as it is so bushy, and there are no heavy, coarse stalks which are usually waste. Lb., 50c, postpaid. F.O.B. here; 10 lbs., \$2.00; larger lots @ 17c per lb.

WILL'S PIONEER BRAND LAWN GRASS SEED

This year the supply of Kentucky Bluegrass is slightly improved, but the price remains high. In addition, the smallest Redtop crop on record contributes to the high price of good mixtures. We have been able to reduce prices a little, however, and maintain or improve the quality of our lawn mixtures. We use no rye grasses.

A Buffalo Grass Lawn

Directions for Making Lawns

The seed bed should be spaded or plowed to a depth of about 5 inches. Lumps should be broken, the surface smoothed, and well firmed. Sow seed evenly on a quiet day, rake in well, and roll if possible. Seed at the rate of 1 lb. for 200 square feet, and water thoroughly.

For the best lawns, good loam soil is needed to a depth of at least three inches. Emerald Lawn Mixture should be used for the best lawns where water is available, with creeping red fescue as a good second choice. Redtop is good for shady spots. For more difficult conditions where watering is less frequent, use Dakota Lawn Mixture, or Fairway Crested Wheat Grass.

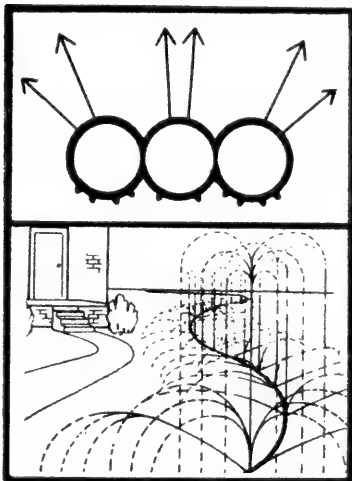

For a dry land lawn, we recommend Buffalo Grass, plants or seed, Fairway Crested Wheat Grass, or Slender Wheat Grass.

Keep well watered until grass is well up. The newly sprouted grass is very tender. Fertilize from year to year, and during the year, as indicated by the condition of the lawn.

We are always happy to advise you on grass problems, and to make up special mixtures for football fields, other public grounds, and any special situations.

SHADE AND ORNAMENTAL TREES

Prices F.O.B. Bismarck unless marked postpaid.

DROPMORE or HARBIN SIBERIAN ELM. This is an extremely hardy selection of the Siberian Elm, grown from seed which came from far north in Asia and selected in Manitoba. It has proven to be absolutely hardy under all conditions and to possess all the other good qualities of the common Chinese or Siberian Elm. 2 to 3 ft., each, \$1.00 postpaid. 90c F.O.B. Bismarck.

CHINESE or SIBERIAN ELM. As a wood lot, shelter belt or grove tree and as a formal or natural hedge this tree has a very definite place in Northwestern planting. Drought resistant and rapid growing beyond almost any other sort.

The occasional winter damage explains why we have steadily refused to recommend this tree as a street or lawn tree. In spite of the winter injury, which has occurred only once every 15 or 20 years, we still feel that this very fast growing and drought resistant tree possesses great value in the Great Plains. Even if it has to be cut back to the ground it will recover in a year or so and produce more new growth than could be obtained in the same time by replanting with any other tree. Seedlings, 12 to 18 in. & 18 to 24 in., see page 56. 4 to 6 ft., each, 60c; 10 for \$5.00; 6 to 8 ft., each \$1.00; 10 for \$9.00; 8 to 10 ft., each, \$1.75.

AMERICAN ELM (Ulmus Americana). Our native white elm. Probably the most graceful and beautiful of our native trees. Excellent for farm planting in good soil as well as for lawn and boulevard. 2 to 3 ft., postpaid, each, 40c; F.O.B. Bismarck. 3 to 4 ft., each, 75c; 4 to 6 ft., each, \$1.00; 6 to 8 ft., each, \$2.25. For seedlings, see page 56.

GREEN ASH. Our native ash, drought, cold, heat and alkali resistant. A fine timber tree. Ash fence posts rank at the top. Grows 1 to 3 feet per year. For seedlings, see page 56. 4 to 6 ft., each 70c; 10 for \$6.50; 6 to 8 ft., each \$1.00; 10 for \$9.50.

NORTH DAKOTA COTTONWOOD (Populus deltoides). The native cottonwood in spite of criticism and disparagement has definitely demonstrated in the past 80 years, that it is, without doubt, hardier, more cold resistant and faster growing than any of the other native trees. For wind-break, shelter belt and wood lot, for fuel it is at the top of the list. We have been headquarters for Cottonwoods for the past 70 years. Prices: for seedlings, see page 56. HARDY APPLE TREES

All Prices Postpaid

All authorities on Great Plains Horticulture recommend planting only young stock such as we offer because it establishes itself much more quickly and easily and there is likely to be less loss, and also recommend planting in bush form to protect against wind and sun scald. Remember that our apples are grafted and budded on the hardiest apple roots in the world.

Haralson

We are glad to report that we have the apple grower in last years catalog now identified. It is the late J. G. Mattson, whose orchard was near Lamoure, N. D., and it is still producing a little. We are indebted to a granddaughter, Mrs. Arle Sax of Banks, N. D.; a grandson, Arthur W. Gunderson of Watford City and Mrs. Warner Quale of Bismarck, a great granddaughter, for the identification of one of Dakotas earliest fruit growers.

HARALSON. A real winter apple, hardy enough for the Northwest. A Minn. Fruit Breeding Farm production. A

strong grower, resistant to fire blight, bears early and yet the fruit keeps in good condition till spring. Apples are large and deep red, flavor excellent. Has proven very hardy. 3 to 4 ft., each, \$1.50.

RED DUCHESS. This is much like the common Duchess but with a handsome red color, and of somewhat better quality. Early. 3 to 4 ft., each, \$1.40.

MANTET. This is an introduction from the Dominion Horticultural Station at Morden, Manitoba, and a result of some of their extensive fruit breeding work. Mantet is to all intents an early, hardy McIntosh with the same deep red color. Ripens with the Duchess and is at its best till October. Sturdy trees and heavy bearing. 3 to 4 ft., each, \$1.40.

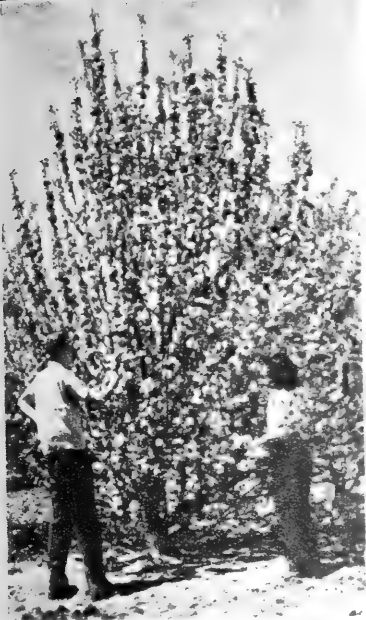

ORIOLE. Large, round fruits. Red stripes over orange yellow. Tender, juicy, with very fine flavor. A little earlier than Duchess. 3 to 4 ft., each, \$1.40.

ANOKA. The earliest bearing of all large apples. Begins to fruit the year after it is planted and bears regularly thereafter. Should be replaced every 5 to 10 years as it is not long lived. Fruit resembles the Duchess. Hardy under severe conditions. A production of Dr. N. E. Hanson. Each, 3 to 4 ft., \$1.40.

ERICKSON. This is one of the best apples of Russian origin. Exceptionally large in size, it is also of fine flavor. Season somewhat longer than that of Duchess, it is of a beautiful and uniform red color when fully ripe.

Oriole

Bush Form Apple

Season Sept. to Nov. Price, 3 to 4 ft., each, \$1.35.

WEALTHY. Keeps till January and is ready for use by October. A Minnesota variety which has become a universal favorite. Tree of good habit, hardy, blight resistant. Bears many large dark red apples with crisp, subacid white flesh tinged with pink. Not as hardy as some of the new sorts but safe over most of the Northwest. 3 to 4 ft., each, \$1.40.

CHARLAMOFF. A Russian sort, a little earlier than Duchess, very hardy and suited to the Northern plains. Strong, vigorous trees. Fruit rather large, somewhat long. Color, yellow flushed with red. Very good flavor. Each, 3 to 4 ft., \$1.35.

LONGFIELD. Another old Russian variety. Very hardy, large, early, productive. Reddish color. 3 to 4 ft., each, \$1.35.

YEAGER SWEET. This Apple, previously listed as a Crab (N. D. No. 6) has been placed after a conference with horticulturists among the real apples. It is 2 to 2½ in. in diameter. It has exactly the flavor of the old-fashioned sweet apple, flesh is of fine texture, and the apples ripen early. Its value is recognized more and more every year. 3 to 4 ft., each, \$2.00.

Wealthy

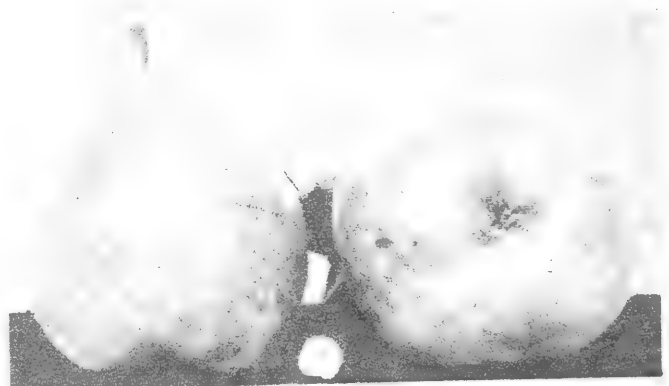

HARDY PEARS

More Than One Pear Tree Should Be Planted To Be Sure of Fruit

Choke Cherry

✓ **NORTH STAR PIE CHERRY.** See inside cover for color picture. A new very hardy pie cherry from the Minnesota Fruit Breeding Farm. The first pie cherry hardy in the Northern Plains. The fruit is large, of excellent quality, juicy and freestone when fully matured. The comparatively small size of the tree is a distinct point of advantage. The original tree growing at the Minnesota Fruit Breeding Farm is 11 years old and is only about 5 feet tall. Each, \$3.50; 5 for \$16.25.

Oka

✓ **VLADIMIR.** A very hardy dwarf Russian pie cherry. Not a very good yielder. 3 to 4 ft., each, \$1.45.
